## Microwave Counter, Power Meter and DVM in One Portable Package

Technical Overview

*Working together,  
we can anticipate—  
and apply—the  
latest advances in  
electronic technology,  
accelerating your  
progress toward new  
successes.*

Everything you need for the installation and maintenance of microwave links:

- A choice of frequency counter ranges up to 46 GHz
- A true power meter to meet your “laboratory-accuracy” requirements in the field
- A dc DVM to assist with antenna alignment and telecom power supply measurements
- Lightweight, rugged and a battery option for complete portability in the field

### **Simplify installation and maintenance of point-to-point microwave links**

Whether you are installing or maintaining cell-site to base-station links, business-to-business communication links, digital radio links (along railroads, pipelines or power lines) or even satellite ground stations, installing and maintaining microwave links typically requires three pieces of equipment. These are a CW microwave counter, a true power meter and a dc DVM.

The 53140 Series reduces the weight, volume and hassle of carrying multiple pieces of equipment in the field by combining these three instruments into one. Its rubber bumpers make it rugged and ready to withstand the elements. A soft carrying case option makes transit to the field easy and has a pouch for accessory storage. You will not have to worry about ac power availability at the site with the 53140 Series’ battery option. Plus its LCD display with a switchable backlite saves on battery life.

## The 53140 Series Measurement Suite

### Save ATE rack space and budget dollars by combining three instruments into one

For measurements used in microwave component and assembly testing, the compact, three-in-one 53140 Series reduces the need for expensive ATE rack space. The 53140 Series comes ATE-ready with both GPIB and RS-232 SCPI programmable interfaces. A rack mount kit is optional.

### CW microwave counter up to 46 GHz

Choose the frequency range you need. The 53140 Series has three ranges; 20 GHz, 26.5 GHz and 46 GHz. The ultra-wideband microwave input covers from 50 MHz up to the maximum frequency. This reduces the need for channel switching. You don't have to wait for resolution that is not needed as the resolution is selectable

from 1 Hz to 1 MHz. For better measurement accuracy over time and temperature, an optional oven timebase is available.

### True power meter with a wide selection of sensors

The 53140 Series true power meter provides laboratory instrument accuracy in a rugged, field-ready package. Obtain 0.01 dB resolution and 0.02 dB basic instrument accuracy where you need it most—on site. The graphical peaking meter allows you to make fast and easy power adjustments. For more flexibility, a wide range of power sensors is available (Keysight Technologies, Inc. 8480 Series\*) with a power range from -70 dBm to +44 dBm.

### DC DVM for AGC and power supply measurements

A  $\pm 50$  Vdc DVM monitors the microwave receiver's AGC circuitry for assistance during antenna alignment. The DVM can also check the -48 Vdc power supplies typically found at telecom sites.

### Advanced instrument features that help make the job easier

The Keysight 53140 Series has the features you expect in a precision laboratory instrument. Relative readings for both frequency and power measurements show deviations from nominal values. Offset reading allows indirect measurement of either final frequency or power values or both. Averaging smooths out rapidly changing measurement displays for ease of viewing.

\* Keysight announced the discontinuance of the 848x "A," "B" and "H" model power sensors that you may use with your counter. However, depending on your power measurement requirements, several of these sensor models can still be purchased from Keysight for use with your microwave frequency counter. [www.keysight.com/find/contactus](http://www.keysight.com/find/contactus)

*Is the convenience of measuring frequency and power with a single input more important to you than power measurement accuracy? Then the 53150 Series of CW Microwave Counters may be for you.*

## Power meter specifications

Frequency range	100 kHz to 50 GHz, sensor dependent.
Power range	-70 to +44 dBm, sensor dependent.
Power sensors supported	8480 Series (see table on page 8)
Resolution	0.01 dB in log mode, 0.1% of full scale in linear mode.
Display units	
Absolute	dBm or Watts
Relative	dB or %
Accuracy	
Instrumentation	± 0.02 dB or ± 0.5%. Add power sensor linearity specification for overall system accuracy.
Zero set (digital setting capability of zero)	Sensor dependent (see table on page 8)
Power reference	
Power output	1.00 mW. Factory set to ± 0.7%, traceable to NIST.
Accuracy	± 1.2% worst case (± 0.9 RSS) for one year
Frequency	50 MHz (nominal)
Connector	N (f)

## DVM specifications

Function	DC volts
Range	± 50 Vdc
Resolution	2 mV
Accuracy	± 0.25% of reading ± 10 mV
Damage level	± 60 Vdc
Input resistance	0.5 MΩ (nominal)
Connector	4 mm banana sockets
Display	Replaces frequency display when DVM activated

## General information

Save and recall	Up to 9 complete instrument setups may be saved and later recalled. These setups are retained when power is removed.
Sample rate	User-selectable fast (nominally 20 ms between readings), medium (nominally 250 ms between readings), slow (nominally 1 s between readings) and hold.
Counter gate time	1/resolution selected
Math functions	
Offset (relative/fixed)	Last reading and/or entered offset to reading for either power or frequency
Averaging	1 to 99 measurement running average
Display	Backlit LCD. Backlight can be turned on or off via front panel control.
Sleep mode (Option 002 only)	Backlight automatically shuts off if no input signal and power sensor present, and no keys pressed, for 5 minutes (nominal).
Self test	Count and power meter circuitry and internal memory automatically tested at startup, via menu selection, or remotely. Error messages displayed to indicate failed tests.
Programming	
Interface	GPIB (IEEE-488.1-1987, IEEE 488.2-1987) and RS-232
Language	SCPI-1992.0 (Standard Commands for Programmable Instruments)
RS-232 rates	User selectable 2400 to 19200 baud
Power supply	
ac	90–132 Vac; 47.5–66 Hz or 360–440 Hz 216–264 Vac; 47.5–66 Hz
Line selection	automatic
Power requirements	80 VA max. (32 W typical)
dc (Option 002 only)	11–18 Vdc; 2A max.
Battery (Option 002)	
Type	VHS camcorder, lead acid (2 each)
Charge time	8 hours in unit (typical)
Capacity	2 hours min. at 25 °C
Size	330 mm W x 156 mm H x 376 mm D with bumpers and handles. Rack panel is full EIA width and 3U ISO height.
Operating temperature	0–55 °C
With battery option	0–40 °C
Weight (nominal)	4.5 kg without battery option, 6.6 kg with battery option
Safety	Designed in compliance with IEC-1010, CAN/CSA 1010.1
EMC	Designed in compliance with IEC-11, EN50082-1, IEC801-2, -3, -4

## Accessories

Supplied	Power sensor cable (11730A) DVM test leads (34132B) Operating/programming and service manuals ac power cord
